

SAFETY GUIDELINES

Scaffolding can provide an efficient and safe means to perform work. However, unsafe scaffolding procedures can lead to accidents, serious injuries and death. This information makes clear that planning ahead for the erection, use and dismantling of scaffolding can substantially reduce scaffold-related accidents and injuries. Compliance with the manufacturer's instructions, the use of this information and compliance with all scaffolding standards will help ensure a safer workplace for employees.

Recommended Scaffolding Erection Procedure.

OSHA Quick Card - Safety Recommendations.

Scaffolding and Shoring - Safety Recommendations.
